

Accolite

Why partner with Securonix?

Many customers today are facing issues around managing too many alerts, with some 90% being false positives, which obviously has implications for the time analysts spend on their investigations.

In addition, with perimeters expanding beyond the confines of the typical workspace, it has become increasingly evident and critical to monitor the threats posed using insider credentials. Regardless of whether the threats are accidental or intentional, they both ultimately lead to data theft or some form of service disruptions.

Major gaps in controls, logging, and monitoring cause organizations to be unaware of the different threats that already exist within their environments. Insider credentials with access to critical infrastructure and data, need to be closely monitored.

The best approach to detect these scenarios is to tie anomalies to an identity using a kill chain approach to model potential threat vectors and detect proactively.

“Securonix’s focus towards big data based threat hunting topped up with the AI/ML driven normalization method which goes beyond the standard signature based log management module really helps it score in terms of better threat visibility, higher quality time utilization of the analyst and a much better response to breaches,” explained Dhruv Gupta, director of cybersecurity at Accolite.

There is a major pipeline of customers that Gupta has identified to take advantage of Securonix’s analytics on top of their log based SIEMs including both upscaling as well as fresh new projects.

Gupta also referenced the “really good” support from Securonix, saying that “the concept of AI/ML and threat chain driven approach towards cybersecurity from Securonix sits very well with our other next gen practices like RPA, big data, UI/UX, cloud, etc.”

About Securonix

Securonix transforms enterprise security with actionable intelligence. Using a purpose-built security analytics platform Securonix quickly and accurately detects high-risk threats to your organization. For more information visit www.securonix.com

Company Profile

Accolite is a \$61 million global IT Services company headquartered in Dallas, USA with offices in UK, SEA, and India. Accolite helps clients develop business solutions to achieve efficiency, effectiveness, and supports large scale product developments, testing, and other IT services. Accolite provides access to an expanded team of smart engineers with deep technical and functional expertise. It delivers accelerated value to customers with a robust banking, insurance, e-com, healthcare, and aviation practice.

Accolite has delivered large programs and skill sets to Fortune companies, bringing about immense value-additions across their investment banking, wealth management, order management, EPOS, retail analytics, commercial, retail banking, and cybersecurity practices. Accolite also serves the AI/ML based niche lines in cybersecurity covering technologies like UEBA (user entity and behavior analytics), SBDL (security big data lake), threat hunting, NBAD (network behavior analytics), PCAP (packet capture), DLP, etc.
