Ebury Drives Better Security Visibility and SOC Efficiency With Securonix Next-Gen SIEM

About Ebury

Ebury is a financial services company, specializing in international cash management solutions including cross-border payments, FX risk management, and business lending. Their unique product offering helps businesses to accelerate and simplify international finance.

The Challenge: Reduce Data Silos and Drive SOC Efficiency

Ebury was looking for best-in-class security monitoring to secure client data and transactions while also supporting key regulatory requirements such as ISO 27001. As Ebury specializes in international finance solutions, they needed a seamless integration within their multi-cloud ecosystem and needed to monitor financial transactions over payment networks like SWIFT. Prior to adopting a SIEM, they leveraged AWS' built-in tools for security monitoring but lacked visibility outside of their applications. On top of dealing with a siloed security solution, their lean security operations team faced alert fatigue and a highly manual investigation process.

They needed to streamline incident case management; simplify security compliance and reporting, and end time-consuming, swivel-chair investigations. They set out to find a Next-Gen SIEM solution that could consolidate their security operations into a single platform and help them improve their overall security posture.

The Solution: Securonix Provides Continuous Security Monitoring for Detection and Response

When searching for a Next-Gen SIEM solution to meet their unique needs, Ebury ultimately chose Securonix Next-Gen SIEM due to our industry-leading behavior analytics. Securonix helped Ebury integrate beyond traditional data sources to extend threat monitoring to their financial and banking applications. Continuous threat monitoring and customizable behavior analytics helped provide a 360-degree perspective around scenarios such as fraud, insider threats, and ransomware.

The Securonix platform provides a broad range of security capabilities that help organizations not only adhere to strict compliance mandates, but also detect fraudulent activity and real-world cyberattacks using a single platform.

Securonix helps financial organizations like Ebury monitor entity behavior across the enterprise network, detect threats, and respond in real-time. Malicious activity can be flagged immediately and acted upon with actions such as account lockdowns and access closure to help protect their environment and mitigate risk.

The Business Impact: One Platform for Security Detection and Response

By adopting Securonix, Ebury now has a connected platform with better visibility and security insights into both their AWS environment and financial applications. Benefits of Securonix Next-Gen SIEM include:

- **Streamlined Integrations:** Collects events from applications and infrastructure at the transaction level to detect and respond to suspicious behavior patterns.
- **Time savings:** Reduces manual investigation times and context switching, unlocking massive time savings for analysts.
- **Compliance:** Automates the previously manual process of gathering compliance reporting for audits and alerting on compliance violations.
- **Behavioral Insights:** Detects threats to financial data and records using out-of-the-box and customized finance use case content.

Ultimately, Ebury found a partner they can trust to protect their business and grow with them as they continue to rapidly expand.

About Securonix

Securonix is redefining SIEM for today's hybrid cloud, data-driven enterprise. Built on big data architecture, Securonix delivers SIEM, UEBA, XDR, SOAR, Security Data Lake, NDR and vertical-specific applications as a pure SaaS solution with unlimited scalability and no infrastructure cost. Securonix reduces noise and prioritizes high fidelity alerts with behavioral analytics technology that pioneered the UEBA category.
