

Faster Threat Detection, Full Control of AWS Data

SECURONIX + AWS BETTER TOGETHER

Securonix and Amazon Web Services (AWS) deliver the power of agentic AI, cloud-native scale, and elastic architecture to transform how enterprises detect, investigate, and respond to security threats.

Built natively on AWS and powered by Amazon Bedrock, the Securonix Unified Defense SIEM accelerates threat detection while reducing costs and maintaining complete data ownership. Together, Securonix + AWS provide a secure, high-performance foundation that accelerates time to value and measurable business outcomes.

Advanced Agentic AI Security, Built for AWS Scale

FASTER THREAT DETECTION ACROSS AWS: Powered by AWS, Securonix delivers high-performance AI automation that rapidly identifies threats across AWS environments using comprehensive out-of-the-box detection rules, streamlining SOC operations.

FULL DATA CONTROL AT LOWER COST: Maintain complete control of your security data across AWS, hybrid, and SaaS environments with our innovative architecture that analyzes data where it lives, keeping your telemetry secure within your AWS infrastructure. This eliminates duplication, reduces SIEM storage costs by up to 50%, and ensures privacy, compliance, and operational efficiency.

ACCELERATED TIME TO VALUE: With over 15 native AWS enterprise integrations and OSCF-standardized logs, Securonix enables rapid deployment and faster return on investment.

COMPREHENSIVE 360° CLOUD VISIBILITY: Gain complete visibility across cloud, hybrid, and on-prem environments with unified AWS telemetry and multi-tenant support for MSSPs. Securonix delivers a single, contextual view of threats to eliminate blind spots, detect lateral movement, and help SOC teams prioritize the risks that matter most.

Why do customers choose Securonix + AWS?

FASTER DETECTION WITH CLOUD-NATIVE AGENTIC AI: Built on Amazon Bedrock, Securonix delivers adaptive, high-throughput analytics for faster, more accurate threat detection.

BUILT-IN AWS INTELLIGENCE: Certified with AWS Security and Cloud Operations Competencies, Securonix offers deep native integrations and standardized data formats for frictionless setup and accelerated business value.

CUSTOMER CHOICE & DATA OWNERSHIP: Unlike traditional SIEMs that require costly data migration, Securonix lets you keep your data where it already lives: on AWS, other public clouds, on-prem, or on SaaS. This approach gives you full control, lowers costs, and ensures fast, efficient analysis without sacrificing privacy.

TRUE SOC PLATFORM: Unify SIEM, SOAR, UEBA, insider threat capabilities and threat intelligence in a single platform to reduce tool sprawl, cut costs, and simplify operations.

PROVEN, TRUSTED PARTNERSHIP: As an AWS Advanced Tier Partner, Securonix provides enterprise-grade protection and operational excellence validated by AWS and trusted by global enterprises.
