# securonix

Data Pipeline Manager Flex Consumption (DPM Flex)

AI-enabled, value-based data consumption that expands visibility and strengthens security posture.

OVERVIEW
Simplify Data Ingestion Across Pipeline Tiers

Securonix delivers a breakthrough in SIEM data management by enabling organizations to ingest, store, and analyze more data for the same cost – removing the long-standing tradeoff between visibility and budget.

Built into the Securonix Unified Defense SIEM at no additional cost, DPM Flex introduces AI-enabled, value-based data consumption that aligns ingestion cost with data value. By normalizing usage into a single flexible entitlement, organizations can expand visibility, increase analytical coverage, and strengthen compliance confidence without exceeding budget or limiting data scope.

HOW IT WORKS
One Entitlement. Infinite Flexibility.

DPM Flex transforms how SIEM data is licensed and consumed. Instead of buying static capacity per pipeline, customers purchase a that flex dynamically across three intelligent pipeline tiers:

Pipeline	Description	Exchange Ratio	Weighting Example
Analytics	Real-time threat detection and correlation	1:1	1.00
Investigation	Enriched contextual data for deeper analysis	1:2	0.50
Basic Logs	Long-term, compliance-driven retention	1:4	0.25

Each tier consumes capacity at a different rate, enabling customers to balance detection, investigation, and retention priorities within a single entitlement.

The result: 30–70% greater effective data capacity without increasing spend, expanding visibility, investigation depth, and overall security posture.

KEY TAKEAWAYS
Visibility Without Compromise

Expand detection coverage, retain more telemetry, and perform deeper investigations—all within the same budget.

- **See More, Spend the Same:** Achieve 30–70% more effective data capacity for identical ingest commitments.

- **No Tradeoffs:** Eliminate the visibility vs. cost compromise that weakens security posture.

- **Value-Aligned Consumption:** Match data cost to its business and operational value.

- **Unified Flexibility:** Manage ingestion across Analytics, Investigation, and Basic pipelines under a single entitlement.

APPLICATIONS

Built for Dynamic Data Strategies

Eliminate ingest barriers as your security and compliance needs evolve.

Use Case	Description
Elastic Log Ingestion	Dynamically adjust data flow across pipeline tiers to match evolving detection or compliance priorities.
Cost-Optimized Retention	Store lower-value logs in Basic or Investigation pipelines to reduce cost per GB.
Unified Data Governance	Track total usage with clear, auditable visibility into normalized pipeline consumption.
MSSP Multi-Tenant Management	Apply flexible consumption models across tenants while simplifying reporting and billing.

CORE FEATURES AND BENEFITS

Expand Visibility. Control Cost. Strengthen Posture.

DPM Flex transforms SIEM data consumption with value-based intelligence and elastic capacity, empowering organizations to license, manage, and scale data ingestion with unprecedented efficiency and control.

Feature	Benefit	Description
Unified Entitlement Model	Simplified Licensing	Manage all pipelines under one flexible entitlement.
Value-Based Ingestion	Optimized Economics	Allocate capacity according to data value and use case priority.
Elastic Consumption	Agile Operations	Dynamically rebalance ingest across tiers without reconfiguration or downtime.
Aggregate Visibility	Operational Clarity	A single dashboard delivers real-time visibility into normalized usage and remaining capacity.
Future-Ready Framework	Scalable by Design	Automatically extends to new pipeline tiers with contract-defined exchange ratios.
SPECIFICATIONS

Specification	Description
Pipeline Tiers	Analytics, Investigation, Basic
Normalization Logic	1 GB Analytics = 3 GB Investigation = 4 GB Basic
Measurement Period	30-day rolling average GB/day
Platform Integration	Native to Securonix Unified Defense SIEM

Why Securonix

Securonix is redefining SIEM data economics. With , customers can analyze more of their security data without added cost or complexity—gaining broader visibility, faster investigations, and stronger compliance outcomes.

By aligning data consumption to its value, Securonix ensures enterprises maintain complete visibility and control across every environment, empowering them to see more and stay stronger.

Take the Next Step.
