

Data Pipeline Agent

ALIGN SIEM COST WITH DATA VALUE

The Securonix Data Pipeline Agent is the AI-driven ingestion and optimization layer of the Unified Defense SIEM. It ensures every analytic, investigation, and response workflow runs on trusted, cost-efficient, and compliant data by classifying, routing, and governing telemetry in real time. The result: the right data, at the right tier, at the right cost — without sacrificing visibility.

AI-Driven Ingestion and Cost Optimization

Intelligent Data Control - Applies AI to automatically classify, filter, and route telemetry as it arrives, aligning ingestion with retention requirements, performance needs, and compliance mandates.

Cost Efficiency at Scale - Optimizes data economics by routing non-security or archival logs to lower-cost pipelines (Basic or Investigation), achieving up to 50% ingestion cost savings while maintaining essential visibility.

Simplified Onboarding - Provides guided setup and inline configuration assistance to minimize errors and accelerate time to value.

Where Data Integrity Meets Operational Efficiency

Operational Efficiency - Eliminates manual pipeline configuration and maintenance. Analysts focus on detection and response while the Agent continuously aligns data flows with policy and budget.

Trusted Data Quality - Ensures every AI-driven action, correlation, and investigation is powered by complete, accurate, and context-rich telemetry.

Predictable, Transparent Costs - Uses DPM Flex's unified ingest unit pricing to align ingestion and retention costs with the business value of each data source.

Governed Data Flows - Applies consistent retention, audit, and compliance policies across all pipeline tiers so organizations maintain governance without operational burden.

Scalable by Design - Automatically adapts to new sources, formats, and data volumes, scaling seamlessly as your SOC grows.

Powered by the Securonix Agentic Mesh

The Data Pipeline Agent collaborates with specialized agents such as Search, Insights, Noise Control and Response. Together, they unify data flow, reasoning, and governance through a human-in-the-loop architecture ensuring every investigation and response is powered by clean, complete, and explainable intelligence.

Proven Results, Trusted by the Industry

Securonix has been recognized as a **6x Leader in the Gartner® Magic Quadrant™ for SIEM and achieved 193% ROI in the Forrester TEI Study**. The Data Pipeline Agent extends this innovation by embedding AI-powered data economics directly into the SIEM, delivering measurable efficiency, predictable pricing, and governance alignment for every byte ingested.

Optimize your data economics with the Securonix Data Pipeline Agent and DPM Flex Pricing.
