# Response Agent

EXPLAINABLE, AUTONOMOUS RESPONSE FOR THE MODERN SOC

Security teams face a relentless volume of alerts, noisy signals, and fragmented workflows. Traditional response tools automate tasks blindly, increasing operational risk instead of reducing it. The Securonix Response Agent changes that.

As the autonomous execution layer of the Securonix Unified Defense SIEM, the Response Agent automates triage, and containment using explainable AI reasoning and human-in-the-loop governance. Every action is transparent, auditable, and aligned to policy— enabling automation you can trust.

Operating within the Securonix Agentic Mesh, the Response Agent transforms verified intelligence from Investigation, Noise Control, and Policy Agents into guided, governed actions that accelerate containment and strengthen SOC readiness.

AI-Driven Response and Containment

AI-Orchestrated Recommendations

Maps alerts to MITRE ATT&CK techniques, correlates related detections, and generates guided containment steps using explainable AI reasoning.

Human-in-the-Loop Governance

Analysts validate, approve, or override recommended actions prior to execution. Every step is logged for complete auditability and regulatory assurance — reinforcing trust and accountability.

Cross-Agent Collaboration

The Response Agent works across the Agentic Mesh with Investigate, Noise Control, and Policy Agents, ensuring each action is informed by verified context, threat intelligence and behavioral insights.

SOAR Integration at Scale

Executes containment actions through existing SOAR frameworks and native Securonix playbooks, shrinking response windows from minutes to seconds.

Continuous Learning and Explainability

Learns from analyst feedback to refine decision models and improve response precision over time. Explainable reasoning accompanies every action, ensuring analysts and auditors understand why the system acted.

Where Autonomous Action Meets Accountability

Accelerate Containment with Confidence

Automates triage and containment to significantly reduce response time, while preserving full visibility and analyst control across the workflow.

Improve Accuracy with Continuous Learning

Learns from analyst validation to refine models and improve response precision over time.

Trustworthy, Explainable Automation

Governed by **Agentic Guardrails**, every action is documented, policy-aligned, and fully explainable — supporting audit, compliance, and executive confidence.

Smarter, Leaner Operations

Integrates seamlessly with existing workflows to decrease mean time to respond (MTTR) and deliver measurable operational efficiency gains.

Accelerate response with explainable, auditable automation.

Powered by the Securonix Agentic Mesh

The Securonix Agentic Mesh is a governed ecosystem of AI-driven agents that collaborate to automate, explain, and scale SOC operations.

The Response Agent orchestrates this ecosystem, converting intelligence into accountable action and enabling the future of autonomous response that is fast, explainable, and built for trust.

Proven Results, Trusted by the Industry

Securonix has been recognized as a **6x Leader in the Gartner® Magic Quadrant™ for SIEM and achieved 193% ROI in the Forrester TEI Study.**

Securonix extends its innovation with the Response Agent — uniting speed, explainability, and trust in a single governed automation framework.
