

User and Entity Behavior Analytics (UEBA)

Detect insider risk. Understand intent. **Act before impact.**

BACKGROUND & CONTEXT

Insider threats and compromised accounts rarely begin with an obvious attack. Activity is spread across identity, endpoint, cloud, SaaS, applications, communications, and AI tools-making it hard to see the full risk.

Securonix UEBA **connects the dots.**

MAIN FINDINGS

- Behavioral analytics identifies meaningful deviations across users and entities.
- Intent intelligence adds the "why" behind risk.
- Threat-chain correlation reveals the full story.
- Prioritized risk scores help analysts focus on what matters most.

IMPACT

- Detect insider risk and compromised accounts earlier.
- Reduce alert noise and accelerate investigations with context and intent.
- Protect sensitive data, reduce business impact, and strengthen trust.

PERSPECTIVES

⊗ AGAINST UEBA

Disconnected alerts and siloed tools that create noise and slow investigations.

Relying on static rules that miss subtle, multi-stage threats

✓ FOR UEBA

Security teams and SOC analysts seeking earlier, more accurate detection and faster investigations.

Risk, compliance, and business leaders who need clear visibility into insider risk

Securonix UEBA unifies behavior, intent, and context into actionable insight.

Give your teams the clarity to act with confidence- before risk becomes impact.
