

Advanced Behavioral Analytics

See risk developing before business impact.

Trusted Access Can Hide Risk

Valid credentials show what is permitted, not whether activity makes sense. Static rules can miss behavioral drift, unusual sequences, and misuse of authority.

One Behavioral Foundation

USERS & ENTITIES

UEBA reveals meaningful change across users, identities, assets, and peer groups.

ENTERPRISE AI AGENTS

AEBA surfaces deviations in purpose, authority, tool use, data access, and interactions.

HUMAN RISK

Insider Intent Agent adds permitted potential-intent context to authorized investigations.

Connect the Evidence

Baseline expected behavior

Detect meaningful change

Add Identity, asset, data and threat content

Prioritize what deserves review

Advance a governed investigation

What Changes for the SOC

Find high-impact risk sooner

Reduce noise and investigation drag

Give analysts decision-ready evidence

Keep consequential decisions human-governed

The Securonix Difference

Instead of creating another analytics silo, Securonix keeps behavioral evidence connected to Unified Defense SIEM, threat intelligence, and governed AI workflows.
